TITIA

Arihiro Miyake

Titia is a suspended swirl of light, 'I had in mind a lamp that would bring together the spirit of Christmas garlands and wooden merry-go-rounds,' summarizes Arihiro Miyake. 'It's an old idea that I can at last bring to fruition thanks to the development of LED technology. A cluster of points of light are enclosed within a form that is as light as possible.' Titia's aim is to light a table in a diffuse and homogenous manner. One of its small technical specifications developed by NEMO for 2017. Titia is a delicate wire silhouette that is available in black or white.
