

1. General dimensions of the lamp.
2. Drill the holes into the ceiling using the template provided. Make sure the power cable (A) is in the center of the four holes. Affix the four brackets (B) to the ceiling using the included plugs and lag screws.
3. Lift the lamp to the ceiling and hang it by inserting the cables in the retainers, as shown in the figure.
4. Make the electrical connection.
5. Insert the base plate (C) into the ceiling bracket (B). Tighten the screws to secure the lamp to the ceiling.

Note: The lamp is wired as per 0-10V regulation.

#### Consumer information:

- Lamps without the IP mark are classed as IP20 and are designed for general interior use, except wet areas (bathrooms, etc.)
- Lamps with the IP mark are designed for exterior use and in wet areas. (E.g. IP54)
- They offer guaranteed protection to people and animals against electrical discharge:
  - Class I: through single electrical insulation and an earthing conductor once correctly connected.
  -  • Class II: through double electrical insulation.
  -  • Class III: these kinds of lamps should be connected at very low voltage levels (generally 12V); therefore there is no risk.
-  • Lamps with this symbol, or without any symbols, can be mounted directly onto normally inflammable surfaces.
-  • Lamps with this symbol cannot be mounted directly onto normally inflammable surfaces.
- The safety of this lamp is guaranteed by using a maximum wattage bulb that does not exceed the figure displayed visibly on the lamp.
-  • The product cannot be treated like conventional domestic waste; it must be taken to the corresponding recycling point for electrical and electronic equipment.
