

Dolmen, terra

by Ferruccio Laviani

FOSCARINI

DESCRIPTION

One of the most iconic designs in Foscarini's history, reworked to adapt to the new opportunities offered by LED technology: Dolmen, designed by Ferruccio Laviani in the mid-Nineties. A piece with a forceful symbolic value, expression of a lamp-sculpture concept that never escapes notice, thanks to the exceptional character of the monolithic form, with four large openings similar to the portholes of a ship, and the unusual positioning against the wall.

MATERIALS

Varnished or anodised aluminium and PMMA

COLORS

Aluminium, Bronze, Orange

technical details

FOSCARINI

Floor lamp for installation resting against a wall for diffused and reflected light. The lamp consists of a laser-cut sheet of aluminium bent using a pressure bending machine and hand-finished. The aluminium is anodised and subsequently liquid coated with transparent varnish or coloured paint. There are two opaline PMMA diffusers, the front one is slightly embossed. There is a plate - also in transparent PMMA - between the two diffusers, which diffuses light from the multichip LEDs installed on the long sides of the aluminium frame. The plate is laser-engraved in the areas aligned with the portholes to concentrate the light reflection. Transparent dimmer and electrical cable, a small canopy holder is compulsory for wall anchoring. .

FERRUCCIO LAVIANI

An architect and designer, Ferruccio Laviani works with companies in both the furniture and the fashion industry, for whom beyond designing products, he also takes care of corporate identity and designs show-rooms across the world.

He is also in charge of artistic direction, communication, setting up exhibitions and events, always with a highly contemporary and recognisable style. He made his début in the world of lighting by designing the Orbital sculpture-lamp for Foscarini, an authentic icon of Italian design, together with his wall lamp version, Bit. The term sculpture-lamp can also be used to describe Supernova, a three-dimensional volume created with two-dimensional surfaces, Dolmen, a piece with a strong symbolic value, and Tuareg, a technological installation inspired by nature.
